Medicaid Disproportionate Share Hospital (DSH) Reductions

The Medicaid statute requires states to make disproportionate share hospital (DSH) payments to hospitals treating large numbers of low-income patients. This provision is intended to recognize the disadvantaged financial situation of those hospitals because low-income patients are more likely to be uninsured or Medicaid enrollees. Hospitals often do not receive payment for services rendered to uninsured patients, and Medicaid provider payment rates are generally lower than the rates paid by Medicare and private insurance. (See CRS Report R42865, Medicaid Disproportionate Share Hospital Payments.)

Whereas most federal Medicaid funding is provided on an open-ended basis, federal Medicaid DSH funding is capped. Each state receives an annual DSH allotment, which is the maximum amount of federal funds that each state is permitted to claim for Medicaid DSH payments. In FY2023, federal DSH allotments totaled $16.0 billion.

DSH Allotment Reduction Amounts
The Patient Protection and Affordable Care Act (ACA; P.L. 111-148, as amended) has reduced the number of uninsured individuals in the United States through the health insurance coverage provisions (including the ACA Medicaid expansion). Built on the premise that with fewer uninsured individuals there should be less need for Medicaid DSH payments, the ACA included a provision directing the Secretary of the Department of Health and Human Services (HHS) to make aggregate reductions in Medicaid DSH allotments equal to $500 million in FY2014, $600 million in FY2015, $600 million in FY2016, $1.8 billion in FY2017, $5.0 billion in FY2018, $5.6 billion in FY2019, and $4.0 billion in FY2020.

Despite the assumption that decreasing the number of uninsured individuals would reduce the need for Medicaid DSH payments, the ACA was written so that, after the specific reductions for FY2014 through FY2020, DSH allotments would have returned to the amounts that states would have received without the enactment of the ACA. In other words, in FY2021, states’ DSH allotments would have rebounded to their pre-ACA-reduced levels, with annual inflation adjustments for FY2014 to FY2021.

The Medicaid DSH reductions have been amended by more than a dozen laws since the ACA. These amendments have delayed the implementation of the Medicaid DSH reductions and modified the reduction amounts. Most recently, the Medicaid DSH reductions were amended in the Consolidated Appropriations Act, 2024 (P.L. 118-42).

Under current law, the Medicaid DSH reductions are to occur from FY2025 (specifically, the period beginning January 1, 2025, and ending September 30, 2025) through FY2027 (see Figure 1). The aggregate reductions to the Medicaid DSH allotments equal $8.0 billion for each of those years.

Figure 1 shows estimates of aggregate DSH allotments for FY2012 through FY2029 before the ACA reductions, with the ACA reductions, and under current law. The ACA reductions that never went into effect totaled $18.1 billion, and under current law the DSH allotment reductions total $24.0 billion.

Figure 1. Total DSH Allotments from FY2012 to FY2029 Without the Reductions, with the ACA Reductions, and Under Current Law

Source: CRS calculation using Consumer Price Index for All Urban Consumers estimates from Congressional Budget Office, The Long-Term Budget Outlook: 2024 to 2025, March 2024.

Note: Medicaid DSH allotments were temporarily increased during the Coronavirus Disease 2019 (COVID-19) public health emergency period (i.e., FY2020 through the first fiscal quarter of FY2024).

Under current law, the aggregate reductions relative to the Medicaid DSH allotments before reductions will be an estimated 53% reduction in FY2025 phasing down to an estimated 51% reduction in FY2027. In FY2028, DSH allotments will rebound to the pre-reduced levels, with annual inflation adjustments for FY2025 to FY2027.

Statutory Requirements for Reductions to State DSH Allotments
Although the aggregate DSH reduction amounts are specified in statute, the HHS Secretary is responsible for determining how to distribute the aggregate DSH reductions among the states using some broad statutory guidelines. The Secretary is required to impose larger percentage DSH reductions on states that (1) have the lowest percentage of uninsured individuals (determined by the Census Bureau’s data, audited hospital cost reports, and
other information) during the most recent fiscal year with available data or (2) do not target their DSH payments to hospitals with high volumes of Medicaid patients and high levels of uncompensated care (excluding bad debt).

The statute also requires the Secretary to impose smaller percentage reductions on low DSH states (i.e., states with total Medicaid DSH payments for FY2000 between 0% and 3% of total Medicaid medical assistance expenditures).

The last specification provided in statute requires the Secretary to take into account the extent to which the DSH allotment for a state was included in the budget neutrality calculation for a coverage expansion approved under a Section 1115 waiver as of July 31, 2009.

Although the statute provides the Secretary with flexibility regarding how to allocate the DSH reductions among the states, in general, states with the lowest percentage of uninsured individuals can be expected to receive relatively larger percentage DSH reductions. In addition, states that do not target their DSH payments to hospitals with the most Medicaid patients and highest levels of uncompensated care can be expected to receive relatively larger percentage DSH reductions. Also, low DSH states should receive relatively smaller percentage DSH reductions. As a result, a non-low DSH state with a low percentage of uninsured individuals that does not target its DSH payments can be expected to receive a relatively larger percentage reduction and a low DSH state with a high percentage of uninsured individuals that targets its DSH payments should receive a relatively smaller percentage DSH reduction.

The magnitude of the Medicaid DSH reductions is such that most states are expected to have DSH allotment reductions. Tennessee is the only state that is not subject to the Medicaid DSH reductions due to the special statutory authority for Tennessee’s Medicaid DSH allotment.

Methodology for Allocating DSH Reductions

On September 25, 2019, the Centers for Medicare & Medicaid Services (CMS) released a final rule regarding the methodology for allocating the Medicaid DSH reductions. The methodology begins by splitting the aggregate DSH reduction amount for each year into two separate amounts: one DSH reduction amount for low DSH states and another reduction amount for non-low DSH states.

Then, for each group of states, half of each group’s DSH reductions would be allocated according to the uninsured percentage factor and half of the DSH reductions would be allocated according to how states target their DSH funds. As shown in Figure 2, the DSH reductions would be allocated according to the uninsured percentage factor (50%), how states target their DSH funds according to the “high volume of Medicaid inpatient factor” (25%), and how states target their DSH funds according to the “high level of uncompensated care factor” (25%). Each state’s reduction would be limited to 90% of the unreduced allotment amount, which preserves at least 10% of states’ allotments.

The methodology would not reduce any portion of a state’s Medicaid DSH allotment that was included in the budget neutrality calculation for a coverage expansion that was approved under a Section 1115 waiver as of July 31, 2009. This would affect the District of Columbia as of July 31, 2009.

Impact of the Reductions to Hospitals

As part of the hospitals’ lobbying efforts to delay the Medicaid DSH reductions this most recent time, it was said that the Medicaid DSH reductions “would be devastating to the hospitals.” However, due to the flexibility that states have in making Medicaid DSH payments, the impact of the reductions on hospitals would vary depending on how states implement their Medicaid DSH payments.

In FY2022, Medicaid DSH payments accounted for 22% (or $15.0 billion) of the total Medicaid payments for inpatient hospital services. According to the Medicaid and CHIP Payment and Access Commission, in state plan year 2019, Medicaid DSH payments were made to 41% of all U.S. hospitals. This ranged from less than 10% of hospitals in a few states to 95% of hospitals in one state. Also, the amount that hospitals receive in Medicaid DSH payments varies significantly by state.
