U.S. Research and Development Funding and Performance: Fact Sheet

Updated October 4, 2021
Research and development (R&D) in the United States is funded and performed by a number of sectors—including the federal government, state governments, businesses, academia, and nonprofit organizations—for a variety of purposes. This fact sheet begins by providing a profile of the U.S. R&D enterprise, including historical trends and current funding by sector and by whether the R&D is basic research, applied research, or development. The final section of this fact sheet includes data on R&D performance by sector.

**Historical Trends in U.S. R&D Funding**

The United States became a global leader in R&D in the 20th century, funding as much as 69% of annual global R&D in the period following World War II. Figure 1 shows the growth in total U.S. R&D expenditures from 1955 to 2019 in current dollars. U.S. R&D in 2019 was 105 times higher than it was in 1955 in current dollars, and more than 13 times higher in constant dollars. By sector, business-funded R&D grew the most during this period. However, faster growth in total R&D spending of other nations reduced the U.S. share of global R&D to approximately 29.9% in 2019.

![Figure 1. U.S. R&D Expenditures by Source of Funding, 1955-2019](image)

Two sectors—business and the federal government—have together accounted for more than 90% of U.S. R&D funding since 1955, though their combined share has fallen from a high of 98% in 1956 to 91% in 2016. Federal R&D expenditures as a share of total U.S. R&D expenditures peaked in 1964 at 66.8%, the same year that business R&D expenditures reached a nadir of 30.8%. Between 1964 and 2000, the federal government’s share fell and business’s share rose. In 2000, business accounted for 69.4% of U.S. R&D expenditures and the federal government 25.1%. This shift in the composition of R&D funding resulted not from a reduction in federal

3. 2019 is the latest year for which total U.S. R&D data are available.
government R&D expenditures, but rather from faster growth in business R&D expenditures. From 2000 to 2010, business R&D’s share declined from 69.4% to 61.0%, and has risen each year since, reaching an all-time high of 70.7% in 2019; from 2010 to 2019, the federal share declined from 31.1% to 21.2%.5 (See Figure 2.)

**Trends in Federally Funded R&D**

In current dollars, federal funding for R&D grew from $3.5 billion in 1955 to $138.9 billion in 2019, a compound annual growth rate (CAGR) of 5.9%. In constant dollars, federal R&D grew by a 2.6% CAGR during this period. However between 2011 and 2014, federal R&D funding, as measured in current dollars, fell for three consecutive years for the first time since such data has been collected; the total decline in federal funding for these years was $8.6 billion (6.8%). In constant dollars, federal R&D declined seven from 2009 to 2016 by a total 16.5%; a similar drop occurred from 1987 to 1994, when federal R&D fell by 16.0%.6 In FY2017, FY2018, and FY2019, federal R&D grew by 2.1%, 4.1%, and 5.3% respectively, in constant dollars. Figure 3 shows federal R&D funding by budget function in constant dollars from 1955 to 2020.

---

6 Ibid.
Notes: Data for 1955–1977 are obligations; data for 1978–2020 are budget authority. 2009 data includes supplemental R&D funding provided by the American Recovery and Reinvestment Act of 2009 (P.L. 111-5). All data are for fiscal years. Data for 2020 are preliminary and may be revised. p=preliminary.

Trends in U.S. Business-Funded R&D

Business funding of R&D, measured in current dollars, has grown nearly every year since 1955. In current dollars, business-funded R&D grew from $2.2 billion in 1955 to $463.7 billion in 2019, a compound annual growth rate of 8.5%. In constant dollars, business-funded R&D grew by a 5.1% CAGR during this period. In recent years, business-funded R&D has grown at a slower pace. Between 2000 and 2019, business R&D grew by 4.9% CAGR in current dollars, and by 2.9% CAGR in constant dollars.7

Current Composition of U.S. R&D Funding

R&D funding can be categorized by the character of the work that it supports: basic research, applied research, and development. (See text box for definitions.) Total estimated U.S. R&D expenditures in 2019 (the most recent year for which data are available) were $656.0 billion. Of this amount, $107.8 billion (16.4%) was for basic research, $124.8 billion (19.0%) was for applied research, and $423.4 billion (64.5%) was for development.8

Table 1 shows total U.S. R&D expenditures in 2018 by funding sector and character of work. Notably, federal R&D funding accounts for the largest share of basic research (40.7%) while business accounts for the largest shares of applied research (55.0%) and development (85.5%). Figure 4 shows this information graphically.

Character of R&D: Definitions

Basic research. Experimental or theoretical work undertaken primarily to acquire new knowledge of the underlying foundations of phenomena and observable facts, without any particular application or use in view.

Applied research. Original investigation undertaken to acquire new knowledge; directed primarily, however, toward a specific, practical aim or objective.

Development. Systematic work, drawing on knowledge gained from research, and practical experience and producing additional knowledge, which is directed to producing new products or processes or to improving existing products or processes.

Current Composition of U.S. R&D Performance

R&D is often performed by sectors other than the one funding the R&D. For example, the federal government performs some of the research it funds, but also funds research performed by business, universities and colleges, and other organizations. Table 2 provides data on performance of U.S. R&D by sector and character of the work (basic research, applied research, and development).
