R44308

Summary

The Hollings Manufacturing Extension Partnership (MEP) program is a national network of centers established by the Omnibus Trade and Competitiveness Act (P.L. 100-418). MEP centers provide custom services to small and medium-sized manufacturers (SMMs) to improve production processes, upgrade technological capabilities, and facilitate product innovation. Operating under the auspices of the National Institute of Standards and Technology (NIST), the MEP system includes centers in all 50 states and Puerto Rico.

NIST provides funding to support MEP center operations, with matching funds provided by nonfederal sources (e.g., state governments, fees for services). Initially established with a goal of transferring technology developed in federal laboratories to SMMs, MEP shifted its focus in the early 1990s to responding to needs identified by SMMs, including off-the-shelf technologies and business advice. As MEP evolved, its focus shifted to reducing manufacturing costs through lean production, quality, and other programs targeting plant efficiencies and to increasing profitability through growth. Current MEP efforts focus on innovation and growth strategies, cybersecurity, commercialization, lean production, process improvements, workforce training, supply chain optimization, and exporting.

In 2017, NIST completed a system-wide revamp of MEP to better align center funding levels with the national distribution of manufacturing activity and to result in a single center in each state and Puerto Rico. Other objectives included aligning center activities to the NIST MEP strategic plan; aligning center activities with state and local strategies; providing opportunities for new partnering arrangements; and restructuring and reinvigorating the boards of local centers.

As originally conceived, the centers were intended to become self-supporting after six years. The original legislation provided for a 50% federal cost-share for the first three years of operation, followed by declining levels of federal support for the final three years; federal funding after a center's sixth year of operation was prohibited. In 1998, Congress eliminated the prohibition on federal funding after year six. In 2017, Congress authorized NIST to provide up to 50% of the capital and annual operating and maintenance funds required to establish and support a center. Previously, the federal cost-share was limited to 50% for a center's first three years of operation, 40% in year four, and one-third in fifth and subsequent years.

The MEP program has, at times, been included in discussions surrounding termination of federal programs that provide direct support for industry. Invoking the intent of the original legislation, President George W. Bush proposed in his FY2009 budget to eliminate federal funding for MEP and to provide for "the orderly change of MEP centers to a self-supporting basis." Nevertheless, Congress appropriated \$110 million for the program. Proponents assert that SMMs play a central role in the U.S. economy and that the MEP system provides assistance not otherwise available to SMMs. Some opponents have asserted that such services are available from other sources and that MEP inappropriately shifts a portion of the costs of these services to taxpayers.

Continued federal support for MEP centers remains a point of contention. In his FY2018, FY2019, and FY2020 budgets, President Trump has sought to eliminate federal support for the MEP program. Congress appropriated \$140.0 million for MEP for FY2018 and FY2019. For FY2020, the House-passed appropriations bill included \$154.0 million for MEP; the Senate has not yet acted.

As Congress makes appropriation decisions, it may continue to discuss support for MEP in the context of the federal government's role in bolstering innovation and competitiveness, and in the context of the appropriate federal role in such activities.

Overview

The Hollings Manufacturing Extension Partnership (MEP), a program of the National Institute of Standards and Technology (NIST),¹ is a national network of centers that provide custom services to small and medium-sized manufacturers (SMMs)² to improve production processes, upgrade technological capabilities, and facilitate product innovation.

The MEP mission is “to enhance the productivity and technological performance of U.S. manufacturing.” The MEP program executes this mission through “state and regional centers [that] facilitate and accelerate the transfer of manufacturing technology in partnership with industry, universities and educational institutions, state governments, and NIST and other federal research laboratories and agencies.”³ Funding for the MEP centers is provided on a cost-shared basis between the federal government and nonfederal sources, including state and local governments, and fees charged to SMMs for center services.⁴

The MEP program received \$140.0 million for FY2019, equal to its FY2018 funding level. In his FY2020 budget, President Trump requested no funding for MEP centers. For FY2020, the House-passed bill (H.R. 3055) would provide \$154.0 million for MEP; the Senate has not yet acted.

The MEP employed approximately 511 full time equivalent federal staff at NIST in FY2018, and the centers have just over 1,300 field staff with technical and business expertise.⁵ In FY2017, MEP completed a system-wide competition that awarded one center to each state and Puerto Rico; previously some states had more than one MEP center.

For FY2018, NIST reported 27,707 interactions with 8,410 unique clients.⁶ In a survey performed by an independent third-party for NIST MEP covering FY2018, the companies served by MEP Centers reported \$15.9 billion in new and retained sales (up 26.2% over FY2017), \$1.7 billion in cost savings and investment savings (approximately the same as in FY2017), \$4.0 billion in new client investment (up 14.3%), and creation and retention of more than 121,000 jobs (up 20.5%).⁷

Background

In the mid-1980s, congressional debates on trade focused attention on the critical role of technological advance in the competitiveness of individual firms and long-term national economic growth and productivity. Reflecting these ideas, the Omnibus Trade and

¹ NIST is an agency of the U.S. Department of Commerce.

² NIST defines SMMs as manufacturers with 500 or fewer employees.

⁵ Email from NIST to CRS, September 4, 2019. OMB Circular A-11 (*Preparation, Submission, and Execution of the Budget*), the Office of Management and Budget defines full-time equivalent (FTE) employment as “the basic measure of the levels of employment used in the budget. It is the total number of hours worked (or to be worked) divided by the number of compensable hours applicable to each fiscal year.” (Source: <https://www.whitehouse.gov/wp-content/uploads/2018/06/a11.pdf>.) A number of NIST employees who are not on the MEP staff provide support services for the MEP program. The work performed by MEP staff as well as by the NIST support staff are used in calculating the FTEs supported by MEP appropriations.

⁷ W.E. Upjohn Institute for Employment Research, *The National-Level Economic Impact of the Manufacturing Extension Partnership (MEP): Estimates for Fiscal Year 2018*, May 10, 2019, <http://research.upjohn.org/reports/239>.

Competitiveness Act (P.L. 100-418) established a public-private program, now known as the Hollings Manufacturing Extension Partnership, to assist U.S.-based SMMs in identifying and adopting new technologies. The focus on SMMs derived from policymakers' perceptions of their contribution to job creation, innovation, and manufacturing.

Research at that time indicated that SMMs produce 2.5 times more innovations per employee than large firms.⁸ Program advocates noted the efforts of other nations to provide technical and business assistance to their manufacturing communities through the establishment of manufacturing extension centers (see text box, "MEP-Like Programs of Other Countries").

In 2016, there were 246,000 SMMs in the United States (500 or fewer employees). These firms accounted for 98.5% of the nation's manufacturing enterprises and employed approximately 5.1 million people in 2015, approximately 44.4% of total U.S. manufacturing employment.⁹

The improved use of technology by SMMs is seen by policymakers and business analysts as important to the competitiveness of American manufacturing firms. How a product is designed and produced often determines costs, quality, and reliability. Lack of attention to process technologies and techniques may be the result of various factors, including company finances, insufficient information, equipment shortages, and undervaluation of the benefits of technology. A key purpose of the MEP program is to address these issues through outreach and the application of expertise, technologies, and knowledge.

NIST requires regular reporting by the centers, including the number and types of projects completed. According to NIST, from MEP's inception through FY2018, the program has worked with 102,443 manufacturers, leading to \$127.3 billion in sales and \$20.5 billion in cost savings, and has helped create and retain more than 1.1 million jobs.¹⁰

MEP-Like Programs of Other Countries

Several other countries also have national networks of centers that provide technical and business support to small and medium-sized manufacturers. For example:

- Germany's Fraunhofer Institutes received approximately €947 million (approximately \$1.1 billion) in funding from German federal and state governments in 2018 for contract research (€763 million), defense research (€60million), and infrastructure (€124 million). Additional public funds are provided for publicly financed research projects. Fraunhofer has 72 institutes and research units and more than 26,600 staff.
- Japan's Kohsetsushi network received \$2.140 billion in 2012 and has 182 centers and 6,000 technical staff.
- Canada's Industrial Research Assistance Program (IRAP) received \$269 million (Canadian, approximately \$207 million (U.S.)) in government funding in 2017. IRAP has more than 130 offices and more than 250 field staff.

Like the MEP, the Fraunhofer Institutes and at least some of the Kohsetsushi centers charge clients fees for their services; IRAP does not charge clients.

Sources: U.S. Government Accountability Office, *Global Manufacturing: Foreign Government Programs Differ in Some Key Respects From Those in the United States*, GAO-13-365, July 2013; Fraunhofer, *Annual Report 2018: 70 Years of Fraunhofer, 70 Years of Future*; National Research Council of Canada, "Industrial Research Assistance Program," accessed August 20, 2019. CRS requested more current information on the Kohsetsushi network from the Embassy of Japan, but the embassy was unable to provide comparable data.

¹⁰ Email from NIST to CRS, September 4, 2019.

According to NIST MEP, for every dollar of federal investment in FY2018, the MEP generated nearly \$31.00 in new client investment and \$29.50 in new sales growth for SMMs. NIST asserts that MEP creates or retains one manufacturing job for every \$1,065 in federal investment.¹¹

A 2019 study performed by the W.E. Upjohn Institute for Employment Research using a constrained model (which assumes competition or displacement between firms), estimated that the services and activities of the MEP center added nearly 237,000 jobs to the U.S. economy and \$24.9 billion to GDP, producing a return of investment of 14.4:1, based on survey data provided by MEP clients.¹²

Evolution of the Program

The MEP program was originally established in 1988 as the “Regional Centers for the Transfer of Manufacturing Technology.”¹³ Over time, the program was referred to by a number of different names, including the Manufacturing Technology Centers program and the Manufacturing Extension Partnership program. The America COMPETES Reauthorization of 2010 codified the name of the program as the “Hollings Manufacturing Extension Partnership” and the centers as the “Hollings Manufacturing Extension Centers.”¹⁴

From its inception through the mid-1990s, the MEP’s principal emphasis was on

establishing the national network—making sure there was a center within reach of all the nation’s manufacturers and linking those centers to one another so they could learn from and teach each other about how best to work with manufacturers.¹⁵

The first three centers were established in 1989. Four more were added in 1991 and 1992. In 1994, the number of MEP centers expanded substantially when NIST took over support of extension centers originally funded by the Department of Defense’s Technology Reinvestment Project. This brought the number of centers to 44. NIST awarded additional centers in 1995-1996, increasing the total to 70 centers.¹⁶ Subsequent consolidation of centers in New York and Ohio brought the number of centers down to 60, including centers in each state and Puerto Rico.

While the focus on helping SMMs has remained constant, the methods and tools used by MEP have evolved since its creation. An intent of the legislation that created the manufacturing extension effort was to provide cutting-edge technology developed by NIST and other federal laboratories to SMMs. Royalties and licensing fees paid to the centers by the SMMs for the use of these technologies were expected to make the centers self-sufficient after the initial six years of

Upjohn Institute for Employment Research, Kalamazoo, MI, May 10, 2019, <https://research.upjohn.org/reports/239/>. Estimation for FY2018 based on all responses using firm variables. Data based on the results of the author’s use of a constrained approach that “assumes that competition among firms mitigates the overall effects of the estimated increase in sales and employment since firms that do not benefit from the services rendered by MEP may lose market share to those that do, and thus grow less quickly than they would have otherwise and perhaps even lose sales and jobs.”

operation. Advanced, federally funded technology, however, did not prove to be what most SMMs needed. Rather, their needs proved to be much more basic, including off-the-shelf technologies and business advice on topics such as management information technology, financial management systems, and business processes. A 1991 assessment of the program by the General Accounting Office (GAO, now the Government Accountability Office) concluded that

While legislation establishing the Manufacturing Technology Centers Program emphasized the transfer of advanced technologies being developed at federal laboratories, the centers have found that their clients primarily need proven technologies. **Thus, a key mandate of this program is not realistically aligned with the basic needs of most small manufacturers** [emphasis added]... [A]ccording to officials from professional and trade associations representing small manufacturers and the results of key studies on U.S. manufacturing competitiveness, such advanced, laboratory-based technologies are not practical for most small manufacturers because these technologies generally are expensive, untested, and too complex.¹⁷

In recognition of this situation, the program was reoriented to offer more basic technologies that helped SMMs to improve their productivity and competitive position. By the mid-1990s, MEP was providing “a wide range of business services, including helping companies (1) solve individual manufacturing problems, (2) obtain training for their workers, (3) create marketing plans, and (4) upgrade their equipment and computers.”¹⁸ As articulated in the NIST Manufacturing Innovation blog,

The initial services were focused on solving immediate and short-term problems—point solutions. The philosophy was an engineering one: ‘You have a problem. We can fix it.’¹⁹

Over time, the MEP’s focus moved from point solutions to more strategic, integrated services. In 2010, the “overarching strategy” for the MEP program was to reduce manufacturing costs through “lean, quality, and other programs targeting plant efficiencies” and to increase profitability “through business growth services resulting in new sales, new markets, and new products.”²⁰

Current MEP efforts focus on innovation strategies, commercialization, lean production, process improvements, workforce training, supply chain optimization, and exporting. One of the key areas of the MEP strategy is technology acceleration.²¹ MEP defines technology acceleration as

integrating technology into the products, processes, services and business models of manufacturers to solve manufacturing problems or pursue opportunities and facilitate competitiveness and enhance manufacturing growth. Technology acceleration spans the innovation continuum and can include aspects of technology transfer, technology transition, technology diffusion, technology deployment and manufacturing implementation.²²

²¹ Personal communication with MEP staff, October 8, 2015.

²² National Institute of Standards and Technology, presentation, “Advisory Board Committee on Technology Acceleration (ABCTA) Report to the MEP Advisory Board,” September 24, 2014.

Technology acceleration encompasses MEP efforts to assist SMMs in the improvement of existing products, the development of new products, and the development and improvement of manufacturing processes. MEP assists SMMs in this regard through a variety of approaches including technology scouting and transfer; supplier scouting; business-to-business network pilots; lean product development; technology-driven market intelligence; access to capital; cooperative research and development activities with NIST laboratories; and use of other federal programs such as the Small Business Innovation Research (SBIR) program,²³ the Advanced Manufacturing Technology (AmTech) Consortia program, and the National Network for Manufacturing Innovation (NNMI, also known as Manufacturing USA).²⁴

While continuing to offer its services to all SMMs, MEP is emphasizing targeted outreach toward growth-oriented SMMs and small entrepreneurial startups.²⁵

Statutory Mission and Activities

The statutory objective of the MEP centers is to enhance productivity and technological performance in U.S. manufacturing through the following:

- the transfer of manufacturing technology and techniques developed at NIST to centers and, through them, to manufacturing companies throughout the United States;
- the participation of individuals from industry, universities, state governments, other federal agencies, and, when appropriate, NIST in cooperative technology transfer activities;
- efforts to make new manufacturing technology and processes usable by U.S.-based small- and medium-sized companies;
- the active dissemination of scientific, engineering, technical, and management information about manufacturing to industrial firms, including small- and medium-sized manufacturing companies;
- the utilization, when appropriate, of the expertise and capability that exists in federal agencies and federally sponsored laboratories;
- the provision to community colleges and area career and technical education schools of information about the job skills needed in manufacturing companies, including small and medium-sized manufacturing businesses in the regions they serve;
- promoting and expanding certification systems offered through industry, associations, and local colleges when appropriate, including efforts such as facilitating training, supporting new or existing apprenticeships, and providing access to information and experts, to address workforce needs and skills gaps in order to assist small- and medium-sized manufacturing businesses; and

²⁵ Personal communication with MEP staff, October 8, 2015.

- the growth in employment and wages at United States-based small and medium-sized companies.²⁶

No direct financial support is available for companies through the centers. The program offers only technical and managerial assistance, and the cost of that is dependent on an MEP center's expenses.²⁷

The statutorily authorized activities of centers include the following:

- the establishment of automated manufacturing systems and other advanced production technologies, based on NIST-supported research, for the purpose of demonstrations and technology transfer;
- the active transfer and dissemination of research findings and center expertise to a wide range of companies and enterprises, particularly small and medium-sized manufacturers; and
- the facilitation of collaborations and partnerships between small and medium-sized manufacturing companies, community colleges, and area career and technical education schools, to help those entities better understand the specific needs of manufacturers and to help manufacturers better understand the skill sets that students learn in the programs offered by such colleges and schools.²⁸

MEP Organization and Structure

The MEP program includes an MEP program office located at NIST (NIST MEP), an MEP Advisory Board, and the 51 MEP centers and their Oversight Boards. In FY2019, NIST MEP had 47 employees and received appropriations to support 80 FTE.²⁹ The NIST FY2020 budget justification, which seeks to end federal support for MEP, requested authorization for no FTE for MEP.³⁰

NIST MEP

A Director and Deputy Director lead the NIST MEP program office. The office is composed of five divisions (see **Figure 1**), some with one or more groups. Here are some of the activities and areas of responsibility for each:

- The **Director's Office** works to provide a strong nationwide network of Manufacturing Extension Partnership centers and supports partnerships across the federal government and within industry that respond to the needs of state- and local-based extension services and supports their integration as a nationwide

²⁶ 15 USC 278k(c).

²⁷ According to NIST, the reimbursement structure for services varies among MEP centers. NIST MEP provides centers with flexibility in programmatic approaches and financial models, while requiring adherence to strict compliance with accounting systems, board governance, and reporting. NIST MEP does not provide MEP centers with guidance on charging clients. Source: email communication between NIST and CRS on November 22, 2015; email communication between NIST and CRS on July 25, 2018.

²⁸ 15 USC 278k(d).

²⁹ Email communication from NIST to CRS, September 4, 2019.

³⁰ National Institute of Standards and Technology, *FY2016 Congressional Budget Justification*, p. NIST-227, http://www.osec.doc.gov/bmi/budget/FY16CJ/NIST-NTIS_FY_2016_CJ_Final_508_Compliant.pdf.

- delivery system to strengthen the global competitiveness of small and medium-sized U.S. manufacturers.
- The **External Affairs Performance and Support Division** works is responsible for executing the mission and vision of the organization for short-term and long-term strategic planning, communication and program performance.
 - The **Marketing and Communications Group** is responsible for promoting awareness of the MEP National Network to small and medium-sized manufacturers as well as external and internal MEP stakeholders; is responsible for all meetings and summits; and handles communications and programmatic planning related to the MEP National Advisory Board.
 - The **Program Evaluation and Economic Research** Group carries out performance evaluations of the MEP centers and the overall network; monitors performance progress; manages center data reporting and client survey processes; and coordinates among the centers and NIST MEP on reporting, performance, and evaluation policy and issues.
 - The **Finance Management and Center Operations Division** prepares annual budgets and operating outcome plans; tracks program expenditures against multiple fiscal year plans; and manages all aspects of budget and finance.
 - The **Center Operations Group** conducts oversight of all MEP cooperative agreements; executes division business plans related to cooperative agreements; coordinates efforts among MEP and grants and procurement offices; monitors centers regarding all financial and compliance aspects; and takes corrective action with respect to centers that are inefficiently or ineffectively providing services to manufacturing firms.
 - The **Regional and State Partnerships Division** engages in partnership development with internal (i.e., NIST and other Department of Commerce offices and agencies) and external organizations to identify, develop, and assign resources; establishes and maintains strategic alliances with state and local government agencies and legislatures, other federal agencies, and manufacturing-related research organizations; and develops strategic alliances and partnerships with original equipment manufacturers and trade associations. The division also coaches and mentors new centers directors.
 - The **Extension Services Division** provides guidance and leadership to the MEP National Network regarding the extension services offered by MEP centers; identifies and develops new focus areas, approaches, tools, and techniques for transforming SMMs into high performing enterprises; and establishes and maintains national-level, strategic manufacturing technology alliances with NIST laboratories, other federal agencies, manufacturing research organizations, industry associations, and professional associations that support U.S. SMMs.
 - The **Network Learning and Strategic Competitions Division** manages communities of practice and working groups; identifies manufacturing trends related to SME needs and barriers to adoption; is responsible for the competition processes used for MEP cooperative agreements; and conducts industry analyses and analyzes emerging markets and supply chain technologies to identify products and services to help SMMs be competitive in the global market.³¹

³¹ Email communication from NIST to CRS, September 4, 2019.

Figure I. MEP Organizational Chart

Source: CRS, based on information provided by NIST on September 4, 2019. Structure as of August 2019.

MEP Advisory Board

Congress established an MEP Advisory Board to provide the NIST Director with advice on MEP activities, plans, and policies; assessments of the soundness of MEP plans and strategies; and assessments of current performance against MEP program plans.³² By statute, the MEP Advisory Board is to consist of at least 10 members broadly representative of stakeholders appointed by the NIST Director. The board is to include at least two members employed by or on an advisory board for a center, at least five members from U.S. small businesses in the manufacturing sector, and at least one member representing a community college. Federal employees may not serve as advisory board members. Members serve staggered terms of three years. A member may serve two consecutive terms. One year from the end of the second term, a member may be reappointed to the board.

The MEP Advisory Board is to act solely in an advisory capacity in accordance with the Federal Advisory Committee Act.³³ The board is required to meet at least twice a year and to report annually to Congress, through the Secretary of Commerce, on the status of the MEP program and programmatic planning. Copies of the MEP Advisory Board annual reports are available online at <https://www.nist.gov/mep/about-mep/advisory-board/annual-advisory-board-reports>.

MEP Centers

The MEP program is administered by NIST through partnerships with 51 centers in all 50 states and Puerto Rico, including approximately 400 service locations³⁴ and more than 1,300 field staff with technical and business expertise.³⁵ MEP seeks to have a center or other service location not more than two hours away from any potential client. **Appendix A** provides a complete list of current MEP centers.

³² 15 USC 278k(e).

³³ The Advisory Board is exempted from the provisions of Section 14 of the Federal Advisory Committee Act, which addresses questions related to termination, renewal, and continuation of advisory committees.

³⁴ According to NIST, “The definition of a service location is broad in that it encompasses locations for which an MEP practitioner can operate out of in order to provide support for the manufacturing community. Service locations range from one-person offices to fully staffed regional offices with all service locations intended to provide adequate coverage for manufacturers. This includes partner locations that can be used to provide services to the manufacturers across the states.” Source: Email communication between NIST and CRS, November 22, 2015.

³⁵ National Institute of Standards and Technology, *FY2019 Budget Submission to Congress*, p. NIST-63, http://www.osec.doc.gov/bmi/budget/FY19CBJ/NIST_and_NTIS_FY2019_President's_Budget_for_508_comp.pdf.

Each center is operated by a state government, university, or other nonprofit organization. Center staff are employees of the center and its partners, not the federal government.

Center Selection

The following sections provide an overview of the criteria used by NIST MEP in awarding centers during the center recompetitions.

Criteria

MEP centers were selected in response to open and competitive solicitations issued by NIST. Federal statute requires that center selections be based on merit using, at a minimum, the following criteria:

- the merits of the application, particularly those portions of the application regarding technology transfer, training and education, and adaptation of manufacturing technologies to the needs of particular industrial sectors;
- the quality of service to be provided;
- geographical diversity and extent of service area; and
- the percentage of funding and amount of in-kind commitment from other sources.³⁶

Following the first MEP center awards in 1989, the number of centers grew to 70, including at least one center in each state and Puerto Rico, and two or more centers in a few states. Later consolidation reduced the number to 60, and under the recompetition to 51 (one in each state and Puerto Rico).

System-Wide Center Recompetition

In 2017, NIST completed a recompetition of all its centers. At the time the recompetition began in 2014, many of the existing centers had not been competed for more than 20 years. According to NIST, the system-wide competition sought to align center funding levels with the national distribution of manufacturing activity and result in a single center in each state and Puerto Rico. Other objectives included aligning center activities to the NIST MEP strategic plan; aligning center activities with state and local strategies; providing opportunities for new partnering arrangements; and restructuring and reinvigorating local center boards.³⁷

Review Prior to Continued Center Funding

Center awards are made as cooperative agreements with an initial performance period of five years. NIST may extend an award for an additional five years following an overall assessment of the center, including “programmatic, policy, financial, administrative, and responsibility assessments.”³⁸ According to NIST, when an application for a multiyear award is approved,

³⁶ 15 U.S.C. 278k(c)(4).

³⁷ Telephone conversation between NIST MEP and CRS, October 23, 2015.

³⁸ National Institute of Standards and Technology, “Award Competitions for Hollings Manufacturing Extension Partnership (MEP),” 79 *Federal Register* 44746-44752, August 1, 2014, <https://federalregister.gov/a/2014-18264>.

funding is usually provided for only the first year of the project; for subsequent years, recipients are required to submit detailed budgets and budget narratives prior to the award of any continued funding. The amount of funds awarded after the first year is provided on a noncompetitive basis and may be adjusted upward or downward. Center funding after the first year is contingent upon satisfactory performance, continued relevance to the mission and priorities of the program, and the availability of funds. Continuation of an award to extend the period of performance or to increase or decrease funding is at the sole discretion of NIST.³⁹

Center Cost-Share and Term of Eligibility

The following sections provide current and historical information on center cost-sharing and term of eligibility for funding.

Current Status of Cost-Sharing and Term of Eligibility

Funding for the MEP centers is provided on a cost-share basis by the federal government and nonfederal sources. The federal government may provide up to 50% of the funds required to establish and support a center regardless of the year of operation of the center. A center must meet the required nonfederal cost-share to be eligible to receive federal funding.

Institutions eligible to compete for a center include nonprofit institutions, or consortia thereof; institutions of higher education; or states, United States territories, local governments, or tribal governments. There is no limit to the number of years a center may receive federal funding.

As discussed above, the recompetition sought to better align center funding levels with the number of SMMs and the cost of providing services to these firms in each center's service area. In this regard, NIST MEP set federal funding levels for each state center. These amounts are the maximum available for the federal cost-share, and a center must meet the required nonfederal cost-share to be eligible to receive full funding. (**Appendix B** provides first-year funding awarded centers in each state in the recompetition, as well as for those centers competed just prior to the recompetition.)

Historical Background on Cost-Sharing and Term of Eligibility

Cost-Sharing

The financial support system created for MEP by Congress in the original legislation was based on matching financing between the federal government and state, local, and/or private nonprofit entities. The Senate Committee on Commerce, Science, and Transportation report to accompany the Technology Competitiveness Act of 1987 (S. 907, 100th Congress) directed that “the percentage of funding offered by particular applicants be considered in deciding which applications be selected.”⁴⁰ Cost-sharing strengthens the ties between the organizations involved in the cooperative arrangement and as such, the committee stated that “special attention will be given to innovative ways in which Federal laboratories, State agencies, and business and professional groups can work together.”⁴¹ The matching provisions were seen as a means to

³⁹ Email communication between NIST and CRS, slide presentation, October 30, 2015.

⁴⁰ S.Rept. 100-80, p. 15.

⁴¹ Ibid., p. 17.

ensure that the centers reflect the actual needs of the manufacturing companies in the area they serve.

The act establishing the Regional Centers for the Transfer of Manufacturing Technology (later the Manufacturing Extension Partnership program) required applicants to provide more than 50% of the capital and annual operating and maintenance costs in years three through six, but did not specify the share to be paid. Instead, the act directed the Secretary of Commerce to determine the maximum cost share and to publish it in the *Federal Register*.

Following the economic downturn of 2007-2009, there were calls for Congress to raise the federal cost-share to 50% from one-third for centers in their fourth or subsequent year of operation. At that time, some commentators argued that during the difficult economic situation, state and local financial support for the program may be curtailed. At the same time, client fees for service decreased 13.4% between FY2008 and FY2009, the first significant decline since FY1996.⁴² Advocates of increasing the federal share noted that such action would permit continued outreach to small manufacturers without pricing the services out of reach for the very small manufacturers. Opponents of this approach argued that the one-third federal contribution was sufficient and that the successful operation of the program was dependent on the financial participation of state and local government as well as the companies utilizing the centers.

The America COMPETES Reauthorization Act of 2010 (P.L. 111-358) mandated that the GAO explore and report on the cost-share provisions of the MEP program. In response, GAO issued a report on April 4, 2011, that noted the following:

We were unable to provide recommendations on how best to structure the cost-share requirement to provide for the long-term sustainability of the program because we could not identify criteria or a basis for determining the optimal cost-share structure for this program. Instead, we have identified a number of factors that could be taken into account in considering modifications to the current cost-share structure. Among other things, past GAO work has found that cost-share structures should promote equity by assigning costs to those who both use and benefit from the services. As it applies to the MEP program, manufacturers, state and local governments, and the nation may all benefit from the program to varying degrees, requiring an evaluation of the relative benefits and aligning cost-shares to reflect who receives the benefits.⁴³

In this regard, GAO noted that NIST's study of the cost-share provision of the MEP program

recommended that the cost-share requirements should be consistent with those of other economic development programs—which it noted, in Commerce, had 1:1 or lower cost-sharing—and should provide flexibility to alter the cost-share requirement in response to economic conditions.⁴⁴

However, GAO also noted that the Congressional Budget Office (CBO) had identified the MEP program for potential elimination from discretionary spending, stating that the program's enhancement of U.S. productivity is questionable. According to CBO, the legislative agency "regularly issues a compendium of budget options to help inform federal lawmakers about the

⁴² Slides provided by Roger D. Kilmer, Director, Hollings Manufacturing Extension Partnership, NIST, May 19, 2010.

⁴³ Government Accountability Office, *Factors for Evaluating the Cost Share of Manufacturing Extension Partnership Program to Assist Small and Medium-Sized Manufacturers*, GAO-11-437R, April 4, 2011, p. 4, <http://www.gao.gov/assets/100/97395.pdf>.

⁴⁴ Ibid., p. 4.

implications of possible policy choices.”⁴⁵ Elimination of MEP was one more than 100 options CBO proposed in 2011 for changes to federal spending and revenues.

In 2014, two bills were introduced with provisions that would have allowed federal support for MEP centers of up to 50% of annual costs incurred, without regard to how long the cooperative agreement has been in effect.⁴⁶ The NIST Reauthorization Act of 2014 (H.R. 5035, 113th Congress) passed the House but did not advance in the Senate. The America COMPETES Reauthorization Act of 2014 (S. 2757, 113th Congress) was introduced in the Senate but did not advance out of committee.

Also in 2014, the MEP Advisory Board recommended that MEP readjust the cost-share structure in order to optimize the federal investment and provide for the long-term sustainability of the program. Specifically, the board recommended requiring to a 1:1 match (50% federal cost share) and allowing the nonfederal cost-share to include in-kind contributions of up to one-half of the center’s portion of the cost-share.⁴⁷

In 2015, the Senate Committee on Appropriations expressed concerns about the federal cost-share structure (as it existed prior to the recent system-wide competition) and directed NIST to provide a report to the committee and to the Senate Committee on Commerce, Science, and Transportation “detailing quantifiable metrics on total MEP center funding, including a breakdown of the type of contribution source across centers that have transitioned from the 50 percent Federal, 50 percent non-Federal cost-share to a lower cost-share held by the Federal Government.”⁴⁸

In 2017, Congress enacted the American Innovation and Competitiveness Act (P.L. 114-329), which, among other things, allowed the Secretary of Commerce to provide up to 50% of center costs regardless of the year of operation of a center.⁴⁹

Term of Eligibility for Funding

The legislation that established the MEP program initially prohibited centers from receiving federal financing beyond their sixth year of operation.⁵⁰ However, federal support beyond the sixth year later became considered necessary in lieu of increasing service charges paid by SMMs. While analysts considered service charges to the SMMs to be important to the effectiveness of the MEP program,⁵¹ some also expressed concerns that an increase in charges commensurate with

⁴⁵ CBO, *Reducing the Deficit: Spending and Revenue Options*, March 10, 2011, <https://www.cbo.gov/sites/default/files/112th-congress-2011-2012/reports/03-10-reducingthedeficit.pdf>. This issue is discussed in more detail later in the report. See “Congressional Budget Office,” pp. 17-18.

⁴⁶ Both H.R. 5035 (113th Congress) and S. 2757 (113th Congress) defined “costs incurred” as costs incurred in connection with the activities undertaken to improve the competitiveness, management, productivity, and technological performance of small and medium-sized manufacturing companies.

⁵⁰ 15 U.S.C. 278k(c)(5), subsequently amended by P.L. 105-309.

⁵¹ In a 1995 study, the U.S. General Accounting Office found that firms that used internal funding to implement recommendations offered by extension programs were the most likely to find an overall positive impact on their manufacturing position. Source: U.S. General Accounting Office, *Manufacturing Extension Programs, Manufacturers’ Views of Service*, GAO/GGD-95-216BR, August 1995.

making the centers self-supporting might make the services too expensive for many SMMs. This perspective was articulated in a 1998 NIST-sponsored study:

Analysis indicates that to offset lost public revenue centers would need to take on much larger projects at much higher billing rates and focus on repeat business. As a result, many small manufacturers would not be able to afford these services. Given this conclusion, the best way to ensure high-caliber nationwide assistance to smaller manufacturers is to commit to a stable amount of renewable federal funding for those centers which receive successful evaluations.⁵²

The prohibition on funding after the sixth year was temporarily suspended by provisions in the FY1997 and FY1998 appropriations acts,⁵³ then eliminated by the Technology Administration Act of 1998 (Section 2, P.L. 105-309). Under the provisions of the act, centers were eligible to receive federal funding of up to one-third of center costs after their sixth year of operation, subject to positive, independent evaluations to be conducted at least every two years. As discussed above, in 2017, the American Innovation and Competitiveness Act (P.L. 114-329) allows the Secretary to provide up to 50% of center funding, regardless of its year of operation.

Other MEP-Related Activities

The MEP program has provided additional funding opportunities for a number of activities that support the program's overarching mission. The Competitive Awards Program (CAP), awards to support the embedding of MEP staff in Manufacturing USA institutes (also referred to as the Embedding Program), the MEP-Assisted Technology and Technical Resource (MATTR) program, and workforce credentials project are examples of such activities.

A number of other efforts have been completed, including business-to-business networks, Make it in America Challenge, Advanced Manufacturing Jobs and Innovation Accelerator Challenge, and Manufacturing Technology Acceleration Centers.

These activities, current and completed, are discussed below.

Current MEP-Related Activities

Competitive Awards Program

In 2017, Congress established the CAP program for “the development of projects to solve new or emerging manufacturing problems.”⁵⁴ Awards are to be made on a peer-reviewed and competitive basis⁵⁵ and may span a period of up to three years.⁵⁶ No matching funds are required under CAP.⁵⁷

NIST has used a rolling Notice of Funding Opportunity (NOFO) to solicit funding applications for cooperative awards of \$50,000 to \$1.0 million each.⁵⁸ Only NIST-funded MEP centers with

⁵² E.S. Oldsman, G.M. Ugiansky, and R. Jamin, *Review of Mission and Operations of Regional Centers*, National Institute of Standards and Technology, February 1, 1998, available at http://www.nist.gov/cgi-bin/view_pub.cgi?pub_id=200288&divison=260.

specified performance ratings are eligible to apply. Centers can apply individually or in partnership with other centers and collaborating entities such as local economic development organizations, universities, community colleges, and other organizations.⁵⁹

Proposals are to be evaluated on the basis of their likelihood of achieving one or more of the following objectives:

- improving the competitiveness of industries in the region in which the center or centers are located;
- creating jobs or train newly hired employees;
- promoting the transfer and commercialization of research and technology from institutions of higher education, national laboratories or other federally funded research programs, and nonprofit research institutes;
- recruiting a diverse manufacturing workforce, including through outreach to underrepresented populations;
- producing other results the NIST director determines will advance the CAP objective.⁶⁰

The statute also encourages the NIST director to seek “broad geographic diversity among selected proposals”⁶¹ and to consider “significant potential for enhancing the competitiveness of small and medium-sized United States manufacturers in the global marketplace.”⁶²

Further, the statute provides for the NIST director to “identify [one] or more themes for a competition carried out under this section, which may vary from year to year, as the Director considers appropriate after assessing the needs of manufacturers and the success of previous competitions.” Themes identified by the NIST director—developed in consultation with the MEP Advisory Board and other federal agencies, and specified in the NOFO—are new manufacturing technologies of relevance to small and mid-size manufacturers, particularly those related to Industry/Manufacturing 4.0;⁶³ supply chain management technologies and practices; and workforce intermediary and business services.⁶⁴ Service area thrusts for CAP awards under these themes include Food Industry Services/Food Manufacturing, Toyota Kata, and Cybersecurity for Manufacturing.

In September 2017, NIST announced seven CAP awards to add capabilities to the MEP national network.

- **Georgia MEP Center.** Two awards were made to the Georgia MEP center:
 - NIST made a three-year award of approximately \$346,000 to the Georgia MEP center, working in collaboration with seven MEP centers, for a project to understand and develop support services for the Georgia machine shop industry to create new markets and implement new technology.

⁶⁴ Ibid., pp. 4-5.

- NIST made a seven-month award of \$35,000 to the Georgia MEP center, working in collaboration with seven MEP centers, to support a Department of Transportation-NIST Inter-Agency Agreement to promote and support execution of the Supplier Connectivity Forum in Atlanta to increase business connections and expand U.S. suppliers in the supply chain.
- **New Jersey MEP Center.** NIST made a two-year award of approximately \$974,000 to the New Jersey MEP, working in collaboration with 10 MEP centers, to establish a program that will support Food Safety Modernization Act (FSMA) capacity building in MEP centers, and offer FSMA readiness assessments, implementation road maps, access to expert FSMA practitioners, and product launch supports.
- **Virginia MEP Center.** NIST made a two-year award of \$1.0 million to the Virginia MEP center, working in collaboration with six MEP centers, to support a project to use the MEP national network to address a set of critical supply chain needs and improve the global competitiveness of small and medium-sized medical device and medical instrument and supply manufacturers nationwide.
- **Nevada MEP Center.** NIST made a two-year award of \$1.0 million to the Nevada MEP center, working in collaboration with eight MEP centers, to promote MEP center staff as “trusted advisors” able to support SMMs to become globally competitive, with growth services, supply chain development, energy savings, strategic planning, and other initiatives.
- **North Carolina MEP Center.** NIST made a three-year award of approximately \$1.0 million to the North Carolina MEP center, working in collaboration with two MEP centers, to support a project to address the needs of small, rural manufacturers seeking to innovate and expand but struggling to address the demands of modern digital supply chains.
- **Michigan MEP Center.** NIST made a one-year award of approximately \$785,000 to the Michigan MEP center, working in collaboration with five MEP centers, to develop a Network Cybersecurity Program that seeks to save companies and jobs while upgrading the value of suppliers to their customers and the skills of their workforce.⁶⁵

In September 2018, NIST announced CAP awards of \$7 million to eight centers to add capabilities to the MEP national network.

- **Georgia MEP Center.** NIST made a three-year award of approximately \$986,000 to the Georgia MEP center (in concert with MEP centers in Idaho, Oregon, and Iowa) to develop and deliver Food Safety Modernization Act (FSMA) compliance and food safety management system implementation services targeting very small food and beverage manufacturers within each state.
- **South Dakota MEP Center.** NIST made a three-year award of approximately \$897,000 to the South Dakota MEP center to make SMMs more competitive and efficient by implementing technological innovations, creating a training/demonstration lab targeting non-traditional new hires that need to acquire skills for employment and incumbent workers seeking to upskill and advance in their careers; collaborating with the NIST Engineering Lab to standardize interface between automated guided vehicles and cognitive radios;

⁶⁵ Email from NIST to CRS, September 13, 2017.

- and developing an automation lab at South Dakota Manufacturing and Technology Solutions to deploy technology directly to manufacturers.
- **Hawaii MEP Center.** NIST made a three-year award of \$1.0 million to the Hawaii MEP center to support a project to help companies overcome skills and talent shortages through in-house training development.
 - **Missouri MEP Center.** NIST made a three-year award of \$1.0 million to the Missouri MEP center to support a project to build robust specialty food manufacturing practices and support SMMs engaged in providing safe food for the nation, and to help food manufacturers comply with regulatory requirements.
 - **New York MEP Center.** NIST made a three-year award of approximately \$778,000 to the New York MEP center to establish a multifaceted commercialization assistance program for entrepreneurs, innovators, and young and very small companies.
 - **Montana MEP Center.** NIST made a three-year award of \$750,000 to the Montana MEP center to create a regional training and technical assistance model to help rural food industry SMMs in the Northwest region of the United States increase their competitiveness by addressing the requirements of FSMA.
 - **Nevada MEP Center.** NIST made a three-year award of \$1.0 million to the Nevada MEP center to support the development of partnerships with state manufacturing innovation centers and to extend university research and related industry innovation in support of Industry 4.0 to small and medium-sized manufacturers (SMMs) in their center's geographic region.
 - **Puerto Rico MEP Center.** NIST made a two-year award of approximately \$630,000 to the Puerto Rico MEP center to improve the competitive position of small manufacturers with less than 100 employees operating in the food industry in Puerto Rico using the Toyota Kata methodology to develop a culture of continuous improvement to assist in compliance with requirements of FSMA.

Embedding of MEP Staff in Manufacturing USA Institutes

In 2016 and 2017, NIST made 14 awards of approximately \$1.2 million each in three rounds of competitions to establish partnerships between MEP and the 14 operating Manufacturing USA institutes (also known as the National Network for Manufacturing Innovation or NNMI).⁶⁶ The awards required no cost-share and had a two-year period of performance; most projects were granted no-cost extensions by NIST to continue working up to an additional year. This effort is sometimes referred to as the Embedding Project. Some projects have ended; others will operate into 2020.⁶⁷

The purpose of these awards, according to NIST, was to further transition of technologies developed at the NNMI institutes to small and medium-size manufacturers.⁶⁸ Specifically, embedded staff were to

develop innovative approaches for transferring technology from the Manufacturing USA institutes to small U.S. manufacturers; create approaches for engaging small manufacturers

⁶⁶ For more information on the Manufacturing USA/NNMI institutes, see CRS Report R44371, *The National Network for Manufacturing Innovation*, by John F. Sargent Jr.

⁶⁷ Email from NIST to CRS, August 21, 2019.

⁶⁸ Email from NIST to CRS, September 13, 2017.

in the work of the institutes through hands-on assistance and services; develop and test business models by which MEP centers and institutes may effectively serve the needs of small U.S. manufacturers in the technology areas of the institutes, and facilitate knowledge and best practice sharing; and cultivate an enhanced nationwide network of partnerships among the institutes and MEP centers.⁶⁹

The awards were made to the following centers:

- California MEP center, to partner with the Clean Energy Smart Manufacturing Innovation Institute.
- California MEP center, to partner with NextFlex, the Flexible Hybrid Electronics Manufacturing Innovation Institute.
- Delaware MEP center, to partner with the National Institute for Innovation in Manufacturing Biopharmaceuticals (NIIMBL).
- Illinois MEP center, to partner with the Digital Manufacturing and Design Innovation Institute (DMDII).
- Massachusetts MEP center, to partner with the Advanced Functional Fabrics of America (AFFOA) Institute.
- Massachusetts MEP center, to partner with the Advanced Regenerative Manufacturing Institute (ARMI).
- Michigan MEP center, to partner with Lightweight Innovations for Tomorrow (LIFT).
- New York MEP center, to partner with the Reducing Embodied-energy and Decreasing Emissions (REMADE) Institute.
- New York MEP center, to partner with the American Institute for Manufacturing Integrated Photonics (AIM Photonics).
- North Carolina MEP center, to partner with Power America.
- Oregon MEP center, to partner with the Rapid Advancement in Process Intensification Deployment (RAPID) Institute.
- Pennsylvania MEP center, to partner with America Makes, the National Additive Manufacturing Innovation Institute.
- Pennsylvania MEP center, to partner with the Advanced Robotics Manufacturing (ARM) Institute.
- Tennessee MEP center, to partner with the Institute for Advanced Composites Manufacturing Innovation (IACMI).⁷⁰

According to NIST, initial survey responses from MEP centers indicate “significant new and retained revenue, operational cost savings, and new client investments.”⁷¹

⁶⁹ NIST, “NIST Awards \$12 Million to MEP Centers in 11 States,” press release, January 13, 2017, <https://www.nist.gov/news-events/news/2017/01/nist-awards-12-million-mep-centers-11-states>.

⁷⁰ NIST, “Pilot Projects Will Bring MEP Small-Business Expertise to Manufacturing USA Institutes,” September 13, 2016; NIST, “NIST Awards \$12 Million to MEP Centers in 11 States,” January 13, 2017; and NIST, “Twelve Awards Made for Notices of Funding Opportunities,” September 1, 2017.

⁷¹ Email from NIST to CRS, August 21, 2019.

MEP-Assisted Technology and Technical Resource (MATTR) Program

The NIST MATTR program provides MEP SMM clients access to the laboratory's core scientific and engineering capabilities, in advanced manufacturing technology, collaborative robotics, additive manufacturing, materials design and characterization, nanotechnology, information and communications technology, quantum information, biosciences, industrial standards, cybersecurity, and other fields.

The MATTR program provides a mechanism for manufacturers with specific needs or questions concerning products or processes to be connected through the MEP centers to the technical expertise, laboratory facilities, and other resources of the NIST laboratories. It also allows NIST lab staff to inquire of the MEP National Network if there are needs in the manufacturing arena that NIST should address.⁷²

NIST offers many kinds of technical assistance through the MATTR program at no cost. However, NIST may charge fees for certain services such as instrument calibrations and special measurements. NIST has rendered technical assistance to SMMs under MATTR on a number of issues, including nanotechnology and thin film measurement technology. NIST is also using MATTR to increase awareness among SMMs of the NIST library of patents and products available for licensing.⁷³

Value and Utility of Skill Credentials to Manufacturers and Workers

The manufacturing workforce is a significant concern for SMMs, including the number of workers available with the knowledge and skills required for unfilled jobs. Some assert a mismatch between open positions in manufacturing firms and the skills of potential employees. One mechanism for addressing this mismatch is the use of skills credentials. In coordination with the NIST Standards Coordination Office (SCO), MEP awarded a competitive contract to Workcred, an affiliate of the American National Standards Institute, to examine the quality, market value, and effectiveness of manufacturing credentials, and the need for new or improved manufacturing credentials.⁷⁴

In April 2018, Workcred published the results of its study in the report, *Examining the Quality, Market Value, and Effectiveness of Manufacturing Credentials in the United States*.⁷⁵ According to NIST, 945 manufacturers participated in the study's surveys and in-depth focus groups. The report cites the following key findings:

- credentials have uneven use in the manufacturing industry and are not routinely required or used as a major factor in hiring or promotion decisions;
- many manufacturers do not know what credentials are available or how they are relevant to their workplace;
- facility size appears to influence credential use, with large manufacturing facilities more likely to prefer credentials than smaller facilities;

⁷² NIST, "Connecting Manufacturers to NIST Laboratories," website, article written by FuzeHub, November 30, 2017, <https://www.nist.gov/blogs/manufacturing-innovation-blog/connecting-manufacturers-nist-laboratories>.

⁷³ Ibid.

⁷⁴ NIST financial assistance award 70NANB16H239, made under an Announcement of Federal Funding Opportunity (FFO, 2016-NIST-MSE-01) by the NIST Material Measurement Laboratory (MML) Grant Program. The NIST FFO can be accessed at https://www.nist.gov/sites/default/files/documents/2017/06/20/fy16-mse-ffo_1.pdf.

⁷⁵ Workcred, *Examining the Quality, Market Value, and Effectiveness of Manufacturing Credentials in the United States*, April 2018, <https://workcred.org/Documents/NIST-MEP-Report.pdf>.

- many manufacturers do not view credentials as the most relevant tools to identify new skilled personnel or as incentives to improve the quality of their existing workforce;
- manufacturers often feel they need to train new employees regardless of whether or not they held a credential, and could not quantify whether credentials added value in terms of reduced cost or reduced training time; and
- manufacturers believe that credentials could serve as a critical resource if they were better understood and made more in line with skills needed in their facilities.⁷⁶

In addition, the report recommended:

- improving understanding about the content, use, and value of credentials;
- expanding the use of quality standards for credentials;
- strengthening relationships between employers, education and training providers, and credentialing organizations;
- adding an employability skills component to existing and new credentials;
- creating credentials that focus on performance and address new roles; and
- increasing the number of apprentices and expanding apprenticeships to more occupations.⁷⁷

Completed MEP-Related Activities

Business-to-Business Networks

In December 2014, NIST MEP awarded \$2.5 million to 10 MEP centers for the establishment of pilot projects to develop, deploy, and maintain business-to-business (B2B) networks.⁷⁸ These networks were intended to help match buyers and sellers of technologies or products and services in support of SMMs. The two-year projects were designed to be scalable and interoperable to help determine whether they could be expanded into a national network or a series of regional ones.⁷⁹ The B2B Network projects have been completed.

Make it in America Challenge

In December 2013, NIST MEP awarded grants to 10 winners in nine states as part of the multiagency Make it in America (MiiA) Challenge, an Obama Administration initiative to accelerate job creation and encourage business investment in the United States. Nine awards were

⁷⁶ Ibid.

⁷⁷ Ibid.

⁷⁸ Funding for the B2B awards was provided via reprogramming of \$2.5 million in FY2014 appropriations from the NIST Technology Innovation Program. Source: Letter from Ellen Herbst, Chief Financial Officer and Assistant Secretary for Administration, Department of Commerce, to Senator Barbara Mikulski, Chairwoman, Senate Committee on Appropriations, March 7, 2014.

⁷⁹ National Institute of Standards and Technology, *FY2016 Congressional Budget Justification*, pp. NIST-229-NIST-230, http://www.osec.doc.gov/bmi/budget/FY16CJ/NIST-NTIS_FY_2016_CJ_Final_508_Compliant.pdf; NIST, press release, “NIST Awards \$2.5 Million in Grants to MEP Centers for Pilot Business-to-Business Networks,” December 2, 2014, <http://www.nist.gov/mep/mep-120214.cfm>.

to MEP centers. Two were to affiliates of the Ohio MEP center. Each received \$125,000 per year for three years.⁸⁰ All MiiA projects have been completed.

According to NIST, MiiA was intended to support the efforts of U.S. companies to keep, expand, or reshore manufacturing operations and jobs in the United States, and to encourage foreign companies to build facilities in the United States and make products domestically. The MEP's MiiA Challenge grants were intended to support greater connectivity in regional supply chains and to assist SMMs.

Advanced Manufacturing Jobs and Innovation Accelerator Challenge

NIST MEP centers participated in the Advanced Manufacturing Jobs and Innovation Accelerator Challenge (AMJIAC), a multiagency effort seeking to strengthen U.S. manufacturing.⁸¹ A 2012 solicitation led to 10 three-year awards totaling \$20 million. All AMJIAC projects have been completed.

According to NIST:

These grants support the creation and strengthening of regional partnerships capable of accelerating innovation and growing a region's capacity for advanced manufacturing. This funding has been used for activities such as worker training programs or connecting manufacturers to resources like national labs or universities. Ultimately, these grants present regions with an opportunity not only to expand their current activities, but also to fundamentally transform the way that the region supports its manufacturers.⁸²

The role of the MEP center participation varied in the awards. In some cases, an MEP center had the primary management role. In other cases, an MEP center was engaged in a partnership with another organization to lead different project elements. In still other cases, an MEP center was part of a broad-based partnership with different organizations leading one or two project elements.

Manufacturing Technology Acceleration Centers

In July 2013, NIST announced a pilot program under MEP, the Manufacturing Technology Acceleration Centers (M-TACs). M-TACs were designed

to explore different approaches to providing manufacturers with the technology transition and commercialization assistance they need to compete successfully and grow their market share within manufacturing supply chains.⁸³

All M-TAC projects have been completed.

⁸⁰ The award recipients were: Maine MEP; Michigan Manufacturing Technology Center; InnovateMEP Mississippi; Missouri Enterprise; Ohio MEP (State of Ohio, Ohio Development Services Agency; two awards, including the Appalachian Partnership for Economic Growth and the Manufacturing Advocacy and Growth Network); Oregon MEP; Northeastern Pennsylvania Industrial Resource Center; South Carolina MEP; and Impact Washington. Source: Email communication between NIST and CRS, November 5, 2015.

⁸¹ Participating agencies include the NIST, the Department of Commerce's Economic Development Administration, the Department of Energy, the Department of Labor's Employment and Training Administration, the Small Business Administration, and the National Science Foundation.

Other Grants

In October 2010, NIST announced \$9.1 million in cooperative agreements for 22 projects “designed to enhance the productivity, technological performance and global competitiveness of U.S. manufacturers.”⁸⁴ The funding was provided by MEP on a competitive basis to nonprofit organizations to work with the MEP centers and address one or more of these areas identified by NIST as critical to U.S. manufacturing:

- responding to evolving supply chains;
- accelerating the adoption of new technology to build business growth;
- implementing environmentally sustainable processes;
- establishing and enabling strong workforces for the future; and
- encouraging cultures of continuous improvement.⁸⁵

According to NIST, “The funding will help encourage the creation and adoption of improved technologies and provide resources to develop new products that respond to changing market needs.”⁸⁶ In this regard, the awards differed from other MEP center activities which do not support research activities.

MEP Strategic Plan

In 2017, NIST MEP released its MEP National Network Strategic Plan. Among other things, the plan identified MEP strategic goals and objectives. The four goals of the plan are to

- **empower U.S. manufacturers**, by assisting them in adopting productivity-enhancing innovative manufacturing technologies, navigating advanced technology solutions, and recruiting and retaining a skilled and diverse workforce;
- **champion manufacturing**, by promoting the importance of a strong manufacturing base to the U.S. economy and protection of national security interests, creating awareness of innovations in manufacturing, creating enabling workforce development partnerships to build a stronger and diverse pipeline, and maximizing awareness of the MEP national network;
- **leverage partnerships**, by leveraging national, regional, state, and local partnerships to increase market penetration, identifying mission-complementary advocates to help expand the brand recognition of the MEP national network, and building an expanded service delivery model to support manufacturing technology advances; and
- **transform the network**, by maximizing the MEP’s knowledge and experience to operate as an integrated national network, increasing efficiency and effectiveness by employing a learning organization platform, and by creating a resilient and

Annual Report to Congress

NIST is required to annually produce and submit to Congress a three-year programmatic planning document, concurrent with the President's annual budget request. This report is to include an assessment of the NIST Director's governance of the MEP program.

The latest version of the plan, *NIST Three-Year Programmatic Plan: 2017-2019*, includes the following information about the MEP program:

NIST's MEP provides technical and business assistance to smaller manufacturers through partnerships between Federal and state governments and non-profit organizations in all 50 states and Puerto Rico. Field agents and programs help manufacturers understand, adopt, and apply new technologies and business practices, increasing productivity, performance, cost savings, reducing waste and creating and retaining manufacturing jobs. MEP also is a strategic advisor to promote business growth and innovation and to connect manufacturers to public and private resources essential for expanding into new markets, developing efficient processes, and training an advanced workforce.⁸⁸

The *NIST Three-Year Programmatic Plan: 2017-2019* report can be accessed at https://www.nist.gov/sites/default/files/documents/director/planning/3_year_plan_2017-19_web_ready2.pdf.

External Reviews and Recommendations

A number of organizations have reviewed and commented on the program's management and effectiveness, and some have offered recommendations for improving the program. The following sections discuss some of the findings and recommendations of these organizations.⁸⁹

MEP Advisory Board

The FY2018 MEP Advisory Board annual report discussed a variety of the board's activities, including:

- the board's participation in the Government Accountability Office's (GAO) report on the increase to the maximum level of federal cost-sharing in MEP centers to 50% under the 2017 American Innovation and Competitiveness Act;
- updates on progress to the MEP National Network Strategic Plan for 2017-2022, NIST MEP competitive awards, embedding MEP Center staff at Manufacturing USA Institutes projects, disaster assistance assessments for manufacturers, and

⁸⁷ NIST, *2017-2022 MEP National Network Strategic Plan*, <https://www.nist.gov/document/mepnationalnetworkplan2017to2022finalpdf>.

⁸⁸ Ibid., p. 8.

⁸⁹ Other comments and recommendations by these organizations are included elsewhere in this report.

- the results of the independent study conducted by the W.E. Upjohn Institute for Employment Research on the MEP program's economic impacts; and
- progress reports on the board's working groups:
 - Performance/Research Development, focused on the issue of performance measurement and management, evaluation, and research to support the MEP National Network;
 - Supply Chain Development, focused on development of manufacturing supply chains, with an emphasis on defense suppliers to address Defense industrial base gaps; and
 - Advisory Board Executive Committee, focused on future Advisory Board leadership and membership recruitment, cultivation of strong Board governance, and expansion of the Advisory Board's role with local MEP center boards.⁹⁰

Government Accountability Office

The Government Accountability Office has reviewed aspects of the MEP program on several occasions since the early 1990s. This section provides highlights of those reviews in reverse chronological order.

In March 2019, GAO issued a congressionally-mandated report on the implementation of the American Innovation and Competitiveness Act provision that allowed the federal government to provide up to 50% of center funding regardless of the center's year of operation; previously, centers in their fourth year could receive no more than 40%, and those in their fifth and later years could receive no more than one-third. The GAO report stated that MEP centers reported that the change improved their financial stability and helped them to better serve SMMs, especially very small and rural manufacturers. The report noted that the change in cost-sharing occurred concurrently with other factors (notably the recompetition of the centers), making it hard to determine the exact impact of the cost-share change.⁹¹

In an April 2017 report on advanced manufacturing, GAO recommended that the Department of Commerce strengthen its collaboration with the other agencies participating in Manufacturing USA.⁹² The Revitalize American Manufacturing and Innovation Act of 2014 (RAMI Act), which established a statutory basis for a Network of Manufacturing Innovation (now branded as "Manufacturing USA"), directed the Secretary of Commerce to ensure that MEP is incorporated in the Manufacturing USA institutes to ensure the research results reach SMMs. NIST has sought to accomplish this by placing MEP staff in the institutes through competitive grants to MEP centers. (See "Embedding of MEP Staff in Manufacturing USA Institutes.")

In a March 2014 report, GAO reported on its investigation into the extent to which the MEP program achieves administrative efficiencies. GAO found that 81.4% of MEP funding supported

⁹¹ GAO, U.S. Government Accountability Office, *Manufacturing Extension Partnership: Centers Cite Benefits from Funding Change, but Impacts Hard to Distinguish from Other Factors*, GAO-19-219, March 7, 2019, <https://www.gao.gov/assets/700/697319.pdf>.

⁹² GAO, U.S. Government Accountability Office, *Advanced Manufacturing: Commerce Could Strengthen Collaboration with Other Agencies on Innovation Institutes*, GAO-17-320, April 6, 2017, <http://www.gao.gov/assets/690/684343.pdf>.

center awards with the balance devoted to contracts, staff, agency-wide overhead charges, and other items, some of which NIST considered direct support and some of which NIST considered administrative spending. In total, NIST estimated that more than 88.5% of federal MEP program spending in FY2013 was for direct support, and the remainder supported MEP administration.⁹³

In 2010 Congress directed the GAO to report on the cost-share structure of the MEP program and provide recommendations for how best to structure the cost-share requirement to provide for the long-term sustainability of the program.⁹⁴ GAO concluded that it was unable to provide such recommendations, as it could not identify criteria or a basis for determining the optimal cost-share structure for this program.⁹⁵ However, GAO cited a number of factors that could be taken into account in modifying the existing cost-share structure including promoting equity by assigning costs to those who both use and benefit from the services. In this regard, GAO identified potential beneficiaries as manufacturers, state and local governments, and the nation and recommended an evaluation of the relative benefits and aligning cost-shares to reflect who receives the benefits.⁹⁶ (See “Cost-Sharing” for a further discussion of GAO’s findings.)

In an August 1995 briefing paper, the GAO explored how small and medium-sized firms were served by various manufacturing extension efforts, including the MEP program.⁹⁷ GAO received 551 responses to 766 questionnaires distributed. Approximately 73% of responding firms stated that their relationships with an extension activity had a positive effect on the company’s business performance. Fifteen percent indicated that there was no effect at all. Among the impacts identified were improved use of technology (63%), better product quality (61%), and expanded productivity (56%). According to GAO, this suggested that manufacturing extension activities “had some success in achieving their primary goal of helping manufacturers improve their operations through the use of appropriate technologies and through increases in product quality and worker productivity.” The study also found that companies which used internal funding to implement recommendations offered by extension programs were the most likely to find an overall positive impact. “Significantly, approximately 97 percent of [these respondents] ... said that they believed that this investment had been worthwhile.” Those who utilized these organizations noted that practical experience in the field contributed to the success of staff activities, as did the affordability of the assistance. Companies that did not utilize the resources provided by the MEP tended to be those that were unaware of the program and the opportunities associated with it.

Further refining this information in a March 1996 report, GAO also noted that company size and age were significant factors in business perceptions of the extension program. Smaller (under \$1 million gross sales) and newer (established after 1985) firms “were most likely to report that their overall business performance was boosted by MEP assistance.”⁹⁸ While there were no real

⁹⁸ Government Accountability Office, *Manufacturing Extension Programs, Manufacturers’ Views about Delivery and Impact of Services*, GGD-96-75, March 14, 1996, p. 3, <http://gao.gov/products/GGD-96-75>.

differences in perception between extension services offered by NIST and those funded by other institutions, there was a difference in assessments of effectiveness based on whether or not payment was required. According to GAO, those firms that paid fees “were half as likely as those that paid no fees to credit the assistance for having an extremely positive impact, as opposed to a generally positive impact, on their business performance.”

Congressional Budget Office

As discussed earlier, the CBO regularly issues a compendium of budget options to help inform federal lawmakers about the implications of possible policy choices. In 2009 and 2011, one of the options CBO proposed was elimination of the MEP program; more recent editions of CBO’s *Options for Reducing the Deficit* have not included the MEP program among its options.

In its 2009 narrative, CBO asserted that proponents of elimination question the appropriateness and necessity of the type of technical assistance offered by MEP, stating that “many university professors of business, science, and engineering consult with private industry, and other ties between universities and business promote knowledge transfer,” that many centers in the MEP system existed before the establishment of the MEP program, and that surveys indicated that about half of MEP’s clients reported that the same services were available to them through other channels but at a higher price. Supporters of the MEP program, according to CBO, point to the importance of SMMs to the economy in terms of output and employment, and in providing supplies and intermediate goods for large companies. Proponents also argue that many SMMs “face barriers that can prevent them from obtaining the sort of information” that MEP provides.⁹⁹

CBO also asserted that

The program’s enhancement of U.S. productivity also is questionable. It can be argued that federal spending for [MEP] allows some inefficient companies to remain in business, tying up capital, labor, and other resources that could be used more productively elsewhere.¹⁰⁰

National Academy of Public Administration

The National Academy of Public Administration also studied the MEP program and in a 2004 report stated that while “on balance ... the MEP Program performs capably and effectively and that the core premise ... remains viable as it is fulfilling its mission by leveraging both public and private resources to assist the nation’s small manufacturers,” there should be consideration of a “fundamental change in the mix of the types of services it provides as well as the structures for delivering them.”¹⁰¹ As such, a Next Generation Strategic Plan was developed by the MEP in 2006 to concentrate on not just the shop floor but on “the entire enterprise and its position in the marketplace.” In addition to individual manufacturing firms, NIST concluded that MEP “must focus on industry/supply chain requirements as well as overall economic development trends.”¹⁰² Current MEP efforts include a focus on helping companies to participate in supply chains (e.g., by helping them become compliant with quality standards) and on supply chain optimization.

Appropriations and Related Issues

This section provides information on FY2019 appropriations for MEP, the status of FY2020 appropriations, and a longer-term perspective on MEP budget requests and appropriations from FY2003-FY2020.

FY2019 Appropriations and the FY2020 Request

As with his FY2018 and FY2019 budget, President Trump proposes to eliminate federal support for MEP in the FY2020 budget request. In FY2018 and FY2019, Congress provided \$140.0 million for MEP. The House-passed level (H.R. 3055) for MEP for FY2020 is \$154.0 million. The Senate has not yet acted.

Table 1. Manufacturing Extension Partnership Program Appropriations, FY2018-FY2019

(budget authority, in millions of dollars)

	FY2019 Enacted	FY2020 Request	FY2020 House	FY2020 Senate	FY2020 Enacted
Manufacturing Extension Partnership program	\$140.0	\$0.0	\$154.0		

Source: Consolidated Appropriations Act, 2019 (P.L. 116-6); *National Institute of Standards and Technology/National Technical Information Service Fiscal Year 2020 Budget Submission to Congress*, March 2019, https://www.commerce.gov/sites/default/files/2019-03/fy2020_nist_congressional_budget_justification.pdf, and H.R. 3055.

Appropriations and Requests FY2003-FY2020

The MEP program has at times enjoyed presidential and congressional support; at other times, it has been targeted for reductions or elimination. These changes are visible in the history of presidential budget requests and congressional actions on MEP appropriations. **Figure 2** illustrates funding levels for the NIST MEP program, both requested and enacted appropriations, for FY2003-FY2019; **Table 2** provides the requested and enacted appropriations amounts.

While President George W. Bush’s annual budget requests generally called for substantial reductions in support for MEP, Congress appropriated generally steady funding except for FY2004 and FY2008. In FY2004, MEP funding was cut to \$38.6 million, down 62.6% from its FY2003 level of \$105.9 million. However, Congress restored MEP funding in FY2005, appropriating somewhat more than it had in FY2003.

In FY2008, MEP funding was cut to \$89.6 million, down 14.4% from its FY2007 level of \$104.7 million. For FY2009, President Bush’s final budget proposed to end federal funding for MEP, requesting \$4 million to allow for “the orderly change of MEP centers to a self-supporting basis.”¹⁰³ Congress opted instead to provide \$110.0 million for MEP, an increase of 22.8% above the FY2008 enacted level.

¹⁰³ NIST, *Fiscal Year 2009 Budget Submission to Congress*, <http://www.osec.doc.gov/bmi/budget/09CBI/NISTand%20NTIS%20FY2009%20Congressional%20Justification.pdf>.

Under President Obama, MEP budget requests equaled or exceeded actual appropriations. In FY2010, President Obama requested and received \$124.7 million for MEP. For the rest of the Obama Administration, MEP budget requests proposed higher funding for MEP than was enacted.

President Trump proposed the elimination of federal support for the MEP centers in FY2018, requesting \$6.0 million “for the orderly wind down” of the program. Congress appropriated \$140.0 million for MEP for FY2018. In his FY2019 and FY2020 budgets, President Trump also proposed the elimination of federal support for the MEP centers, requesting no funding for the program.

Between FY2003 and FY2019, MEP enacted appropriations grew at a compound annual growth rate (CAGR) of approximately 1.8% per year, slightly below inflation.¹⁰⁴

Notes:

- a. Enacted levels reflect an across-the-board rescission enacted in P.L. 108-7.
- b. Enacted levels reflect across-the-board rescissions enacted in the FY2004 Consolidated Appropriations Act, P.L. 108-199, and NIST's share of the Department of Commerce's unobligated balances rescission.
- c. Enacted levels reflect across-the-board rescissions enacted in P.L. 108-447, FY2005 Consolidated Appropriations Act (\$9.5 million). Does not reflect unobligated balances rescission of \$3.9 million.
- d. Enacted levels reflect across-the-board rescissions enacted in P.L. 109-108, FY2006 Science, State, Justice, and Commerce Appropriations Act and in P.L. 109-148, FY2006 Defense Appropriations Act.
- e. Enacted levels include 0.2% across-the-board rescission.
- f. Enacted levels reflect the 1.877% rescission, 0.2% rescission, and the 5% sequester applied to 2013 annualized CR level.

Use of MEP Appropriations for Center Awards

In response to direction from Congress,¹⁰⁵ GAO investigated the extent to which the MEP program achieves administrative efficiencies. In its March 2014 report, GAO found that of the \$608 million spent on the MEP program from FY2009 to FY2013, about \$495 million (81.4%) went to center awards. The balance was spent on contracts, staff, agency-wide overhead charges, and other items, some of which NIST considered direct support and some of which NIST considered administrative spending. According to GAO, NIST estimated that more than 88.5% of federal MEP program spending in FY2013 was for direct support, and the remainder (11.5%) was for administration.¹⁰⁶

¹⁰⁵ Explanatory Statement, Consolidated and Further Continuing Appropriations Act, 2013, *Congressional Record*, March 11, 2013, p. 1301.

¹⁰⁶ Government Accountability Office, *Most Federal Spending Directly Supports Work with Manufacturers, but Distribution Could Be Improved*, GAO-14-317, March 2014.

The NIST FY2019 spending plan anticipated the following allocation of MEP FY2019 appropriations (\$140.0 million), carry over funding from FY2018 (\$6.8 million), and funding from other agencies (\$2.8 million):

- \$120.0 million for support of MEP centers,
- \$4.5 million for strategic competitions (e.g., the Competitive Awards Program),
- \$7.1 million for contracts (e.g., marketing, communications, center transformation),
- \$9.8 million for NIST MEP labor, and
- \$8.2 million for NIST and program overhead.

Appropriate Role of the Federal Government

Continuing financial support for the MEP program is part of a larger ongoing debate among federal policymakers about the appropriate role of the federal government in providing assistance to U.S. industry. The MEP program has, at times as it is now, been included in discussions surrounding termination of federal programs that provide direct support for industry. Proponents assert that SMMs play a central role in the U.S. economy and that the MEP system provides information and assistance not otherwise available to SMMs. Some opponents have asserted that such services are available from other sources and that MEP inappropriately shifts a portion of the costs of these services to taxpayers. NIST MEP notes that an independent survey of MEP clients provides evidence that MEP activities bring positive returns to the U.S. Treasury.

Proponents of the program stress that no direct funding is available to companies. Some opponents assert that activities such as those performed by the MEP centers are a state responsibility and that the federal role should have ended as the original legislation envisioned.

In addition, some have questioned whether federal support for the MEP centers should continue to be provided indefinitely.¹⁰⁷ As originally expressed in statute, MEP centers were to receive no federal funding after their fifth year of operation, instead deriving necessary revenues from state and local governments as well as from the companies utilizing the centers' services. In 1998, Congress lifted the prohibition on funding after the fifth year and allowed NIST MEP to provide up to one-third of center costs after their sixth year of operation indefinitely. More recently, Congress has enacted legislation that allows for federal MEP funding to support up to 50% of a center's costs indefinitely. The debate over whether the federal government should continue to provide financial support to the centers indefinitely and, if so, at what level, may be revisited by Congress, especially in light of the Trump Administration's proposal to defund the MEP program in FY2019.

These and other issues may be debated as Congress continues to make appropriation decisions relating to manufacturing extension as it pertains to the role of the federal government in facilitating research and technological advancement.

¹⁰⁷ Note: In this usage, "indefinitely" refers to the MEP centers in general, not to a specific center. Under ACIA, each MEP center must be competed after 10 years of continuous funding.

Appendix B. Center Funding After System-Wide Competition

Table B-1. NIST First-Year Center Funding Following System-Wide Recompetition
(by state, in current dollars)

State	First Year NIST Funding	Round
Alabama	\$1,780,800	3
Alaska	\$500,000	2
Arizona	1,000,000	n/a
Arkansas	971,218	3
California	14,046,449	3
Colorado	1,668,359	1
Connecticut	1,476,247	1
Delaware	\$500,000	4
Florida	3,500,000	n/a
Georgia	2,693,482	3
Hawaii	500,000	4
Idaho	640,236	2
Illinois	5,029,910	2
Indiana	2,758,688	1
Iowa	1,859,206	4
Kansas	1,864,950	4
Kentucky	\$600,000	n/a
Louisiana	1,197,546	3
Maine	863,522	4
Maryland	1,000,000	n/a
Massachusetts	2,467,879	3
Michigan	4,299,175	1
Minnesota	2,653,649	2
Mississippi	1,003,782	4
Missouri	2,207,873	3
Montana	512,000	3
Nebraska	600,000	n/a
Nevada	756,001	4
New Hampshire	628,176	1
New Jersey	2,814,432	2
New Mexico	1,360,802	4

State	First Year NIST Funding	Round
New York	5,985,194	2
North Carolina	3,036,183	1
North Dakota	500,000	4
Ohio	5,246,822	3
Oklahoma	1,309,080	2
Oregon	1,792,029	1
Pennsylvania	5,280,586	3
Puerto Rico	643,133	3
Rhode Island	750,000	n/a
South Carolina	2,268,003	4
South Dakota	500,000	n/a
Tennessee	1,976,348	1
Texas	6,700,881	1
Utah	1,147,573	3
Vermont	500,000	3
Virginia	1,722,571	1
Washington	2,534,872	2
West Virginia	500,000	2
Wisconsin	3,250,792	2
Wyoming	500,000	4

Source: NIST, “NIST Awards \$26 Million to Support Manufacturing in 10 States,” press release, February 24, 2015, <http://www.nist.gov/mep/awards-support-manufacturing.cfm>; NIST, “New Funding Brings New Opportunities for Manufacturers in Nine States,” press release, September 21, 2015, <http://www.nist.gov/mep/new-funding-brings-new-opportunities-for-manufacturers-in-nine-states.cfm>; NIST, “New Funding Awarded to Support Wisconsin Manufacturers,” press release, November 13, 2015, <http://www.nist.gov/mep/new-funding-awarded-to-support-wisconsin-manufacturers.cfm>; email from NIST to CRS, September 13, 2017.

Note: “n/a” indicates that the centers had been competed just prior to the start of the recompetition, and thus were not competed in rounds 1-4 of the recompetition.
